

Department of Computer Information Systems and Technology
Major Student Learning Outcomes

Computer Information Systems

Upon completion of this program, graduates will be able to:

Content Knowledge

- Identify network models, architecture, transmission, and the seven layers of OSI.
- Identify each stage of the systems development life cycle.
- Explain how information systems contributes to the rendering of management decisions within an organization.

Application Skills

- Design, develop, and implement a database.
- Integrate the information management functions of controlling, leading, organizing, and planning within a nationally competitive simulation.
